

Use case UC4: View Trips (same as View Trip History)

Primary Actor: User

Stakeholder and Interest: User wants to view his current/past trips

Preconditions:

- A trip has been previously booked successfully to the registered id and name.
- A ticket corresponding the correct trip and user exists in the database

Success Guarantee (Postconditions):

- Data of the trip is displayed

Main success scenario (or basic flow):

User can enter his id and name to view his previously/currently booked trips. This information is displayed on the UI for viewing.

Extensions (or alternative flows): No trips are displayed due to a not having booked any

Special Requirements: None

Technology and Data Variations List: None

Open issues: None
